

DO NOT SCALE

The diameter shown is not necessarily perpendicular to either linear function shown.

AOB is a diameter of the circle.

COD is a sector within the circle forming an angle of 37° at the centre.

What is the area of the circle outside the sector?

What is the length of the line, CABD going around the edge of the circle?

What is the length of the line, CAOBD, going around the edge of the circle and then cutting across the diameter?
