

If you put an even digit in each black bordered square and an odd digit in each red bordered square, will the total of each row or column be odd or even?

What happens with the green bordered square? Is it possible to put an answer in that box of either odd or even?

Are there any rules which you can work out to determine what happens so that in future, you can predict what should happen more easily?

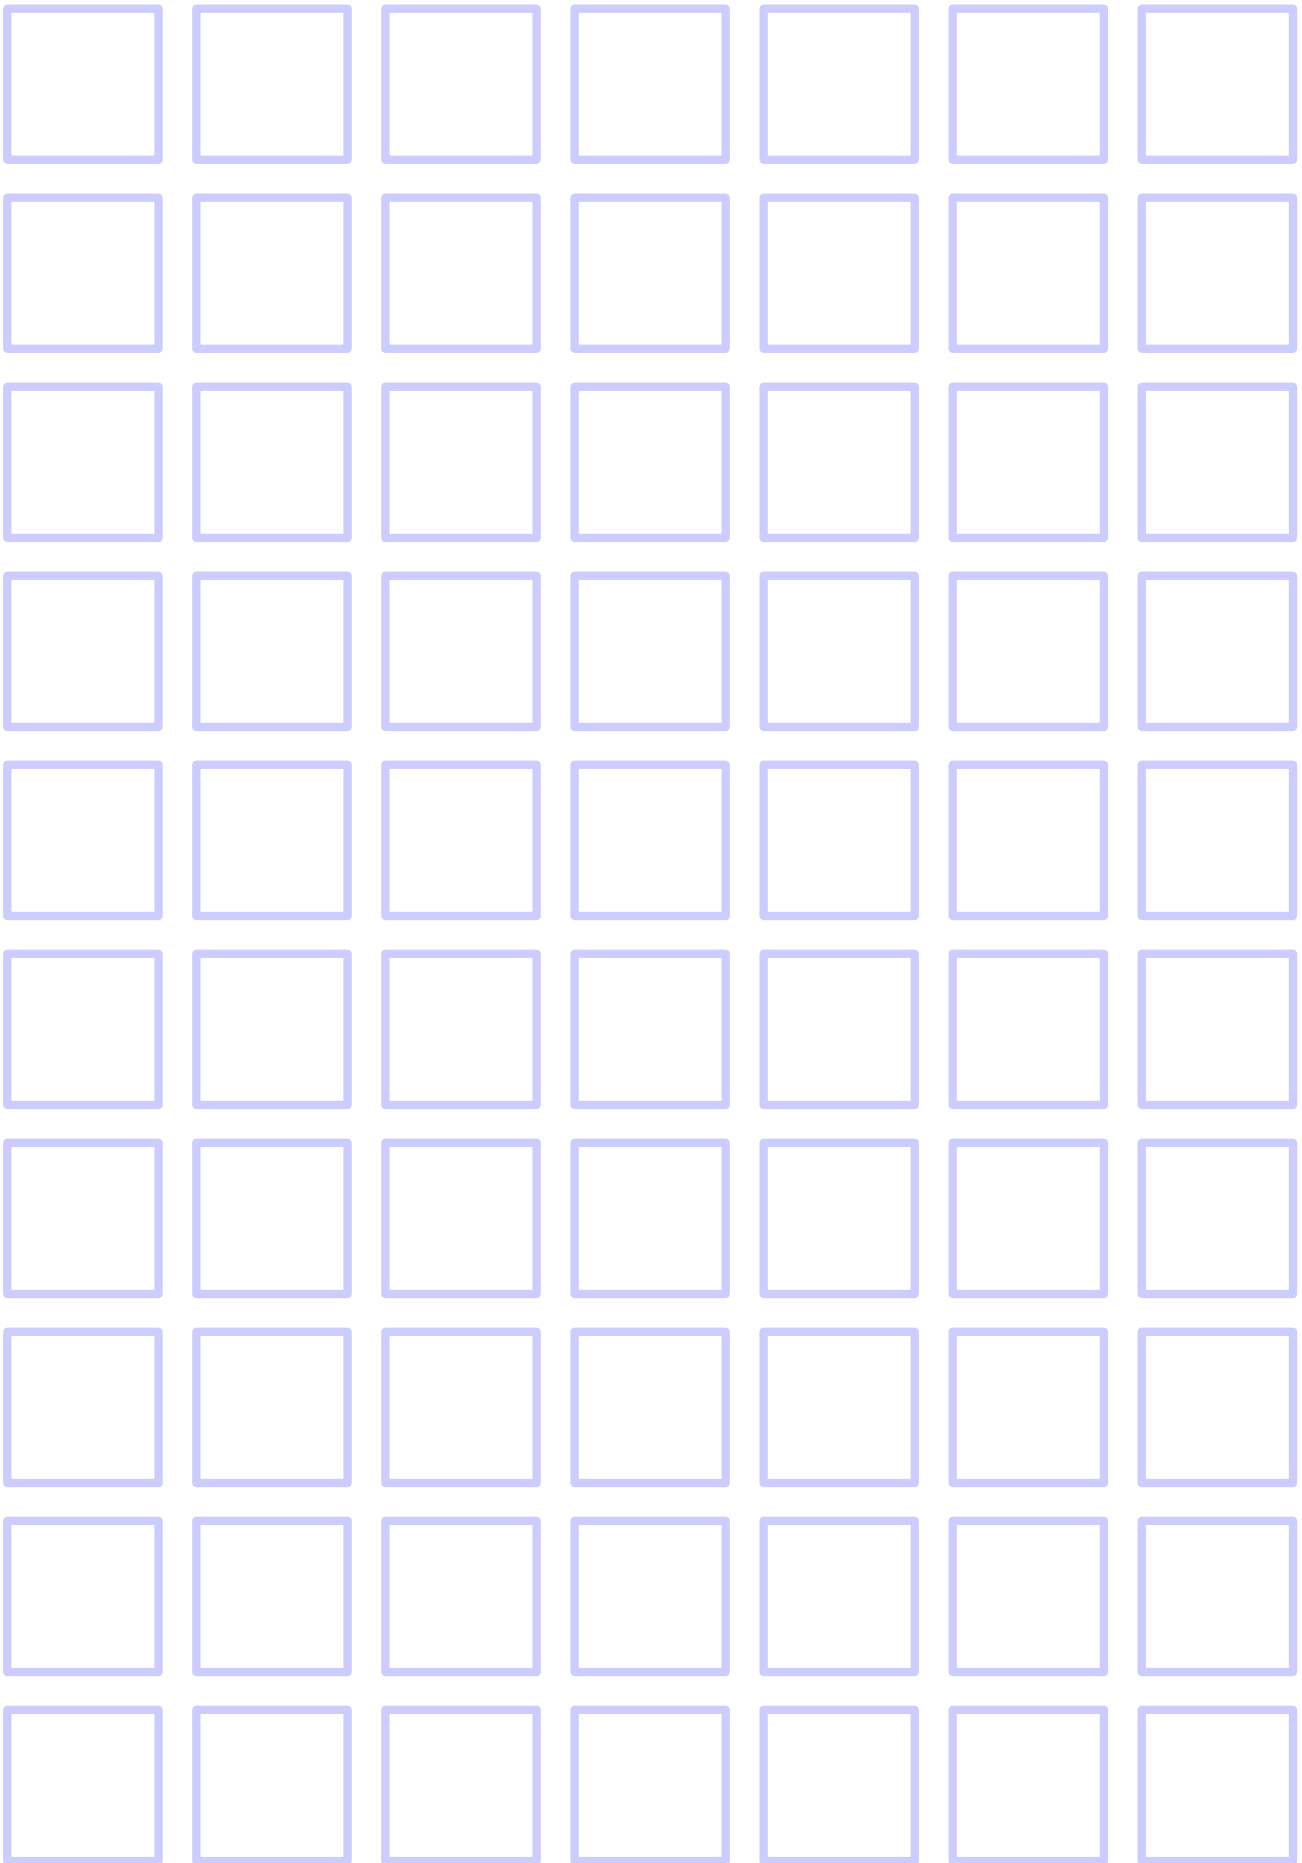

Odd

What happens with the green bordered square? Is it possible to put an answer in that box of either odd or even?

Are there any rules which you can work out to determine what happens so that in future, you can predict what should happen more easily?

Can you build a pattern of odd and even squares such that the right hand column and the bottom row have twice as many even numbers as odd ones?
What happens to the square in the bottom right hand corner?
